MM Docket No. 99-25

Regarding The Creation of Low Power FM Licenses: RM-9242, RM-9208 Dear Chairman Kennard:

I teach about the Media in a K-12 school. My kids desperately want to start their own radio station, but the costs and obstacles are too great unless we can bring back low-power radio. PLEASE don't cave into the broadcasters' concerns. Low-powered radio is an extremely important component to the survival of a true democracy. Every measure that shuts the general public out of the PUBLIC airwaves is a nail in the coffin of democracy. PLEASE, please remember that the broadcasters pay people to get people to write letters to you supporting continuation of the ban. Against their funded lobbying efforts, the voices of us who represent the citizens' perspective seem small, I'm sure. But remember that the FCC serves the public, not just the corporate interests. Please take that into account as you consider the feedback you receive by August 2nd.

Linda S. Brown 5902 East Cactus Wren Road Scottsdale, AZ 85253

Dear Honorable Chairman Kennard,

We are writing to commend you and the Federal Communications Commission for taking action on an issue of great importance to us - ending the 21-year ban on community access to the airwaves. We have become increasingly concerned about the growing concentration of the media in our country and are pleased that the Commission is responding to public outcry to increase opportunities for local communities to use our radio airwaves.

One of the fundamental tenets of our democracy is to ensure that diverse interests have opportunities to express themselves, not merely to be the recipients of what a handful of other people tell them. It is a nonnegotiable component of our right to a free press and free speech.

No. of Copies rec'd popular List ABCDE

Radio is perhaps the most qualified of any media outlet to provide community access. It is a relatively inexpensive medium to produce and is well-suited to cover community issues and local culture. Unfortunately, over the past three years the U.S. radio broadcasting industry has experienced an unprecedented wave of consolidation and mergers. As a result, the electronic medium best suited to inexpensive, local programming has become arguably the most regimented and centralized of our major media. Even a multimillionaire would have trouble entering the radio broadcasting industry today, because economies of scale (permitted by deregulation) demand that a firm own numerous stations in several markets to be even remotely competitive. As for the person of average means, their lot is limited to being a passive consumer of an increasingly monopolistic industry that has less and less competitive pressure to heed the diverse, local needs of listeners. And, for poor people and others who are considered unimportant to the advertising community, radio increasingly has little to offer. Again, the great tragedy of this situation is that radio is the ideal medium to provide an accessible local service for democratic communications of interest and value to the entire population.

Awarding licenses for new low power FM radio stations would empower local communities with a new public forum to express its many voices, cultures, ideas, and needs. Low power radio stations would create much needed public fora for a variety of groups - including community activists, youth, ethnic and linguistic minorities, the religious community, local artists and cultural associations - and provide a forum for dialogue and debate about important local and public interest issues. These kinds of stations would strengthen community identity in urban neighborhoods, rural towns and other communities which are currently too small to win attention from "mainstream", profit-driven media.

The strong interest in independent radio stations shows that the creation of low power radio service would have wide public support. The tremendous demand for microradio is demonstrated by the emergence of a national Free Radio Movement, widespread civil disobedience, constitutional challenges of the Commission's aggressively enforced 21-year ban, as well as the proliferation of unlicensed community radio stations supported by local government, whose operators broadcast at the risk of financial losses, seizure of property, arrest, and in some cases, imprisonment.

In addition, the Commission has stated that in the last year alone, 13,000 people inquired regarding the possibility of obtaining a license for low power broadcasting in their communities. In support with the efforts of the Microradio Empowerment Coalition (mec@tao.ca), we urge you to legalize microradio in order to benefit non-commercial community groups whose interest in microradio is to communicate, to educate, and to inform, not to make money. We are confident you agree that broad citizen access to information and culture is at the heart of a democratic society.

- Microradio licenses should be awarded for non-commercial use only. The current radio spectrum is dominated by commercial media. LPFM licenses should go to non-commercial community groups who want to use radio to communicate with their neighbors, not make profit from them.
- 2. Licenses should be held locally, be non-transferable, affordable to all communities, easy to apply for and limited to one per license holder; they should NOT be businesses.
- 3. Power levels should be up to 100 watts in urban areas and up to 250 watts in rural areas.
- 4. The Commission should NOT diminish new low-power stations to "secondary status." It would be a tragedy to take away licenses from low-power community stations just because the Commission subsequently granted a power increase to a pre-existing station or granted a new high power license somewhere nearby.
- 5. The Commission should grant full amnesty for the microbroadcast pioneers who have suffered government seizure and fines. Their property should be returned. They should be granted equal opportunity in applying for and receiving new licenses.
- 6. Problems, technical or otherwise, should be referred to the local voluntary micropower organization for assistance or mediation (e.g. the Ham radio model). The FCC should be the forum of last resort.
- 7. LPFM must be protected and maintained in the future as radio makes the transition from analog to digital broadcasting.
- 8. If the FCC intends to license some commercial stations, they must be licensed last. In this instance, there should be a 2 year "headstart" for non-commercial licenses. The right of citizens to communicate is protected by the Constitution and the FCC's mandate. The right to make money through local radio is not a protection under the FCC's mandate.
- 9. Stations should be locally programmed. However recorded materials such as music, poetry, documentaries, features etc. may be used. Sharing of program materials and resources among micro and community stations is strongly encouraged. No more than 20% of air time from off-site feeds or syndicated tapes.
- 10. Licenses should be awarded to unincorporated non-commercial associations, and non-profit organizations.
- 11. Within two years new spectrum space (including any future digital spectrum space) should be allocated for continued expansion of microradio broadcasters so that any community group that wishes to broadcast has access to available spectrum space (frequencies). Further, all manufacturers of consumer radio receivers for sale in the United States should be required to include this spectrum set aside for microradio broadcasters.
- 12. Licensing fees should be affordable to all communities.

Again, we commend Chairman Kennard and the Commission for your willingness to address these issues. We are hopeful that the creation of a new class of low power FM radio licensing becomes a reality during the Chairman's present term. We look forward to working on making the airwaves more accessible for our local communities.

- 4. The Commission should NOT diminish new low-power stations to "secondary status." It would be a tragedy to take away licenses from low-power community stations just because the Commission

subsequently granted a power increase to a pre-existing station or granted a new high power license somewhere nearby.

- 5. The Commission should grant full amnesty for the microbroadcast pioneers who have suffered government seizure and fines. Their property should be returned. They should be granted equal opportunity in applying for and receiving new licenses.
- 6. Problems, technical or otherwise, should be referred to the local voluntary micropower organization for assistance or mediation (e.g. the Ham radio model). The FCC should be the forum of last resort.
- 7. LPFM must be protected and maintained in the future as radio makes the transition from analog to digital broadcasting.
- 8. If the FCC intends to license some commercial stations, they must be licensed last. In this instance, there should be a 2 year "headstart" for non-commercial licenses. The right of citizens to communicate is protected by the Constitution and the FCC's mandate. The right to make money through local radio is not a protection under the FCC's mandate.
- 9. Stations should be locally programmed. However recorded materials such as music, poetry, documentaries, features etc. may be used. Sharing of program materials and resources among micro and community stations is strongly encouraged. No more than 20% of air time from off-site feeds or syndicated tapes.
- 10. Licenses should be awarded to unincorporated non-commercial associations, and non-profit organizations.
- 11. Within two years new spectrum space (including any future digital spectrum space) should be allocated for continued expansion of microradio broadcasters so that any community group that wishes to broadcast has access to available spectrum space (frequencies). Further, all manufacturers of consumer radio receivers for sale in the United States should be required to include this spectrum set aside for microradio broadcasters.
- 12. Licensing fees should be affordable to all communities.

Again, we commend Chairman Kennard and the Commission for your willingness to address these issues. We are hopeful that the creation of a new class of low power FM radio licensing becomes a reality during the Chairman's present term. We look forward to working on making the airwaves more accessible for our local communities.

MM Docket No. 99-25

Regarding The Creation of Low Power FM Licenses: RM-9242, RM-9208

Dear Honorable Chairman Kennard,

We are writing to commend you and the Federal Communications Commission for taking action on an issue of great importance to us - ending the 21-year ban on community access to the airwaves. We have become increasingly concerned about the growing concentration of the media in our country and are pleased that the Commission is responding to public outcry to increase opportunities for local communities to use our radio airwaves.

One of the fundamental tenets of our democracy is to ensure that diverse interests have opportunities to express themselves, not merely to be the recipients of what a handful of other people tell them. It is a nonnegotiable component of our right to a free press and free speech.

Radio is perhaps the most qualified of any media outlet to provide community access. It is a relatively inexpensive medium to produce and is well-suited to cover community issues and local culture. Unfortunately, over the past three years the U.S. radio broadcasting industry has experienced an unprecedented wave of consolidation and mergers. As a result, the electronic medium best suited to inexpensive, local programming has become arguably the most regimented and centralized of our major media. Even a multimillionaire would have trouble entering the radio broadcasting industry today, because economies of scale (permitted by deregulation) demand that a firm own numerous stations in several markets to be even remotely competitive. As for the person of average means, their lot is limited to being a passive consumer of an increasingly monopolistic industry that has less and less competitive pressure to heed the diverse, local needs of listeners. And, for poor people and others who are considered unimportant to the advertising community, radio

No. of Copies rec'd 2 copies

increasingly has little to offer. Again, the great tragedy of this situation is that radio is the ideal medium to provide an accessible local service for democratic communications of interest and value to the entire population.

Awarding licenses for new low power FM radio stations would empower local communities with a new public forum to express its many voices, cultures, ideas, and needs. Low power radio stations would create much needed public fora for a variety of groups - including community activists, youth, ethnic and linguistic minorities, the religious community, local artists and cultural associations - and provide a forum for dialogue and debate about important local and public interest issues. These kinds of stations would strengthen community identity in urban neighborhoods, rural towns and other communities which are currently too small to win attention from "mainstream", profit-driven media.

The strong interest in independent radio stations shows that the creation of low power radio service would have wide public support. The tremendous demand for microradio is demonstrated by the emergence of a national Free Radio Movement, widespread civil disobedience, constitutional challenges of the Commission's aggressively enforced 21-year ban, as well as the proliferation of unlicensed community radio stations supported by local government, whose operators broadcast at the risk of financial losses, seizure of property, arrest, and in some cases, imprisonment.

In addition, the Commission has stated that in the last year alone, 13,000 people inquired regarding the possibility of obtaining a license for low power broadcasting in their communities. In support with the efforts of the Microradio Empowerment Coalition (mec@tao.ca), we urge you to legalize microradio in order to benefit non-commercial community groups whose interest in microradio is to communicate, to educate, and to inform, not to make money. We are confident you agree that broad citizen access to information and culture is at the heart of a democratic society.

- 1. Microradio licenses should be awarded for non-commercial use only. The current radio spectrum is dominated by commercial media. LPFM licenses should go to non-commercial community groups who want to use radio to communicate with their neighbors, not make profit from them.
- 2. Licenses should be held locally, be non-transferable, affordable to all communities, easy to apply for and limited to one per license holder; they should NOT be businesses.
- 3. Power levels should be up to 100 watts in urban areas and up to 250 watts in rural areas.
- 4. The Commission should NOT diminish new low-power stations to "secondary status." It would be a tragedy to take away licenses from low-power community stations just because the Commission

subsequently granted a power increase to a pre-existing station or granted a new high power license somewhere nearby.

- 5. The Commission should grant full amnesty for the microbroadcast pioneers who have suffered government seizure and fines. Their property should be returned. They should be granted equal opportunity in applying for and receiving new licenses.
